

Refurbishment Services

An extensive engineering facility with specialist resources dedicated towards the overall maintenance of heavy industrial plant and equipment.

Our manufacturing halls are available all year round operating a service with specific programmes and deliveries scheduled to suit each customer requirement.

General refurbishment activities include a wide range of engineering expertise from TSP and usually involve:

- Removal from Site
- Dismantle, clean up and inspection
- Draft specification
- Design or redesign
- Manufacture of new components
- Rebuild
- After sales service and spares

Inspection and functional testing activities are supported by a fully equipped standards room to ensure workmanship of the highest quality.

Ongoing development is a key objective throughout the refurbishment process, with engineering support focused directly on the design and enhancement of equipment, to improve product quality, machine availability and overall performance.
