

Apprenticeships

Brad Petre

"I HAVE INCREASED CONFIDENCE IN MY ABILITY AND PROGRESSION IN MY JOB WHICH IS VERY REWARDING. I ENJOY COMING TO WORK EVERY DAY AND FACING THE CHALLENGES AND RESPONSIBILITY THAT IT BRINGS. I HAVE A GREAT DEPARTMENT AROUND ME WITH EXPERIENCE THAT CAN HELP & SUPPORT ME IN ANY WAY WHICH IS A BIG HELP IN BUILDING KNOWLEDGE IN MY ROLE."

Brad is in the middle of an EAL NVQ Level 3 Engineering Technical Support Apprenticeship within the Quality Assurance department. He personally chose to undertake an apprenticeship "because it seemed like an excellent opportunity and offered me the best chance of a career without going down the traditional route of A Levels and University." Brad considers apprenticeships "to be a great opportunity to gain experience from skilled people who have many years of wisdom and experience on the job whilst also providing an opportunity to gain qualifications."

"Work faces unique challenges every day and keeps you on your toes" says Brad, "there's never a quiet moment, I have passion for the business, take pride in my work and enjoy helping others, knowing I am a part of a success or an achievement of a goal."

"My duties include the confirmation of authenticity of materials by the checking and clearing of documentation for items to be used on the job and the collation and analysis of performance information to root cause by managing a defect note/ non-conformance process which records any costs associated with remedial works and charts to highlight trends."

Recently Brad has been involved with the use of a FARO laser tracker which in his words "is very interesting piece of equipment" and will shortly undertake training in basic radiation safety awareness to allow him to use a Positive Materials Identification device which aids confirmation of authenticity of materials received.

Brad plans to gain as much knowledge and experience and as many qualifications as possible to become a respected team member that can help the business achieve its goals.
