

Apprenticeships

Jordan is an EAL NVQ Level 3 Engineering Technical Support Apprenticeship and is based within the demanding Projects department. He is responsible for updating the LfE (Learning from Experience) log and keeping the projects gate tracker up to date. This gate tracker controls the progression of any particular job and is an essential part of the project programming process. Both duties require Jordan to interact with different areas of the business, where he gains an insight into how the different departments operate.

Like many other apprentices, Jordan considers an apprenticeship “to be the sensible route to gaining more practical knowledge and work experience being in a working role.” Couple that with gaining qualifications whilst on the job and it should help him further his career in the future.

Jordan says, “gaining an insight into how an actual business operates is one of the many benefits I have experienced thanks to my apprenticeship here at TSP Engineering, along with the increase in confidence.”

This increase in confidence is frequently mentioned when discussing the benefits of an apprenticeship and Jordan certainly agrees. “After working with a wide range of people within the business, I can honestly say that my confidence has improved since the beginning of my apprenticeship”.

This boost of confidence is certainly required in the projects department which is involved with high level stakeholder management.

Jordan Foster

JORDAN CONTINUOUSLY LOOKS TO IMPROVE HIS KNOWLEDGE AND EXPERIENCE. HE SAYS “HIS IDEAL JOB ROLE WOULD BE ONE THAT HE ENJOYS BUT PROVIDES A CHALLENGE AT THE SAME TIME.”
