

Apprenticeships

Shaun Little is in his final year of a Level 3 Advanced Machinist Apprenticeship. He found that an apprenticeship was the best choice for him to enter a career in engineering. He is learning to work on and operate machinery including manual and CNC mills and lathes.

Shaun has found that he can now work on machinery effectively and is learning more and more as time progresses. "I have enjoyed the experience of rotating my work on different machines" says Shaun. "I am currently working on both the G60 Horizontal Boring Mill and Radial Arm Drill, working on components for our projects for our clients, Hertel."

Shaun says that he has formed good working relationships with both his apprentice coordinator and his colleagues and hopes to continue working at TSP Engineering and enter Higher Education after he has completed his apprenticeship.

Shaun Little

"I AM ENJOYING LEARNING A TRADE FOR A CAREER IN ENGINEERING. IN THE FUTURE I WOULD LIKE TO TAKE MY CAREER ANOTHER STEP FURTHER AND BECOME A MECHANICAL DESIGNER OR ENGINEER."
